I have a table which needs to be updated everytime a field changes. That field is

the Phone Number, so what I need to do is update the field if it's null, but not if it's blank or anything else. Here's an example of what I have now if(is_null($_POST['Phone'])) { $Phone = ''; } I don't like this one because if someone leaves a field blank the is_null will still be true, so it'll insert a blank value. I've tried using a zero-length fieldset to check if it's null but nothing seems to work. So what I'd like to know is: -What is the best way to go about checking if the Phone field is a1d647c40b
