But what AutoCAD does not do, are sheet metal and plastics modeling and design (only some basic drawing). There are a number of competing products in this field, such as: AutoCAD also provides a number of online web applications for design review, versioning and sharing of designs. Some older products were based on AutoCAD R14. These include: History The first version of AutoCAD was a feature-limited command-line application, written by a small team that grew into a large one. In 1983, the first version, AutoCAD for DOS (and Windows), was released, based on the internally developed AutoLISP and Visual LISP, released as Autodesk's first major new product to come out in over a year.
