It's very easy to use and has an intuitive interface that can be accessed through a simple mouse click. It is possible to define custom areas or take screen shots of the entire screen. This will save time since you no longer need to first draw the area you want to take a screen shot of. It is also possible to mark areas of the screen that are not supposed to be included when taking a screen shot, so you can take a screen shot of only the area of the screen you want to save and avoid wasting space. We found that it was very easy to take a screenshot of the entire desktop and even custom areas and that it exported the captured image in different formats. The only problem we found with the application was the lack of support for hotkeys, which makes it a little harder to use when you want to save the screenshot in a folder and have it automatically saved to a file.
