There are many Adobe Photoshop tutorials available to help you get started: Types of Photoshop Tutorials There are many types of Photoshop tutorials. Some tutorials are meant to describe and teach how to use Photoshop's features. Most tutorials have extensive material and include user guides. In this article, we will go over what to expect from each type of Photoshop tutorial and how to identify which one to use if you're unsure. Feature Tutorial These tutorials are simply full of a single feature. Most of these tutorials are very good, but often they are so focused on a single feature that they fail to teach much else. These are mostly the most useful for people who already have an idea of the features that Photoshop will let them use. The features of Photoshop tutorials can range from cropping to using filters and can usually be taught in one tutorial. If you're just starting out with Photoshop, you'll probably be best off using these tutorials to get a good understanding of the features that you'll be using. They can be quite useful for designers who are already familiar with the features and want a better understanding of how they work. History Tutorial These tutorials are very useful for those who want to learn about the development of Photoshop as well as the history of the program. Each tutorial examines an era and shows how Photoshop evolved. These tutorials are very technical and cover a lot of information, but they're always well organized. Photoshop History tutorials range from simple history lessons to elaborate ones that cover Photoshop's entire timeline. As with any Photoshop tutorial, the content will probably vary in quality. It also depends on the instructors' experience; more advanced topics and images can be confusing to those with less knowledge of the program. Something to note is that since Photoshop is constantly being updated, tutorials written a few years ago may no longer be reliable. Behavioral Programming Tutorial Behavioral programming is a programming method that is intended to run alongside, or "on top of," an operating system. Thus a tutorial that teaches behavioral programming would include an example of a software application being created on top of the OS, as opposed to something that is solely a tutorial about the program. There are a few reasons that behavioral programming tutorials are not very common. In reality, behavioral programming tutorials are very similar to object-oriented programming tutorials since they focus on object-oriented style program structure. A common misconception is that the students will

Amazon's Ring cameras may be spying on users' homes when you're not there — or are you paying for it? A Houston-area Ring user's surveillance system was allegedly used to spy on his ex-wife and their teenage son, according to a lawsuit filed against the on-demand video-surveillance service. "Ringer published images containing Mr. Williams's [ex-wife] most intimate moments [and] full-body images of Mr. Williams and their son," the suit states. "Ring, however, is aware of the potential misuse of its system by any user, yet presents this information as if no one would ever look at the data." The suit came to light when a lawyer for a second woman also filed a suit in Texas on Wednesday against Ring claiming that the camera system captured nude photos of her without her consent. "Ring knows that individuals who use Ringer devices will use these devices on a regular basis, because Ring actively encourages their use," reads the second suit. "Nothing in this Agreement prohibits or restricts the use of your Device or the viewing or recording of content on your Device by any person or entity." In a statement, Ring said its products are intended for individuals who need to keep an eye on their property or people they want to protect. It said it has "never sold or otherwise provided access to images of people not on the device's property." "We take the privacy and security of our customers' private moments seriously and have a zero tolerance policy for misuse of our products," it added. Amazon did not respond to a request for comment. The suit against Ring says that in March 2018, a friend, "Monroe", told the plaintiff that the ex-husband of the user of a Ring device was "trying to have sex with [his ex-wife] via webcam without her knowledge." The suit says that Monroe, who has known the ex-husband for 17 years, encouraged the plaintiff to install the device. To allegedly help the ex-husband, Monroe surreptitiously downloaded the "films made by the ex-husband," according to the suit. In November 2018, the plaintiff told the ex-husband that she had changed her Ring password
