It is just like recording a single keystrokes on your keyboard and playing it back like a video. This is an example of using KEYMACRO with Lotus Screensaver - Lotus Esprit. It will also work with other image screensavers. You can use this as a tool to test your internet connection. Let's you type a bunch of text and then you will see the result. KEYMACRO has a built-in dictionary. You can search a word that you want to record a keystroke for or a word that you want to playback a keystroke for. You can do it by simply type a few letters and then press a key on your keyboard. After you press a key on your keyboard, this will show the result on the screen. Simply press the appropriate key to stop recording. You can save the result on your PC with the WAV or the AVI file. If you want, you can record your own voice into the file. You can adjust the speed by changing the delay. The WAV file is simply a file format. It is usually used for audio recordings. It includes a lot of options. In order to save the file, choose the Save button. You can choose the format, the sample rate, the bit rate and the number of channels to record. By default, the WAV file is uncompressed. You can also record in the compressed format. The AVI file is used to save videos. You can choose the file format, the video mode, and the frame rate. You can also record the audio into the file. Let's see how to use this: First, download the KEYMACRO. Then, choose the option that you want to use for this screen saver. You can use the option that matches your operating system. In most cases, the option is "Open" but it is also possible to use "Save" or "Save As". After that, you should save the file. After that, you should select the files that you want to use. You can also use the "Insert" option to add some files. You can also choose the order of the files. You can add the wav file, the AVI file, and the txt file that you want to use. After that, click on the "Playback" button. You will see the result on the screen. 77a5ca646e
