

ScPlayer is a small open-source audio player developed specifically for helping you play music from your local disk drive or network. Portable utility You can drop the tool on USB flash drives or other portable devices and carry it with you all the time. In order to gain access to its GUI, you only need to run the executable file (you do not need to follow the steps included in an installation process). In addition, it does not write entries in your Windows registry so you can get rid of it using a simple deletion task. Client and server specifications ScPlayer comes packed with a client version that gives you the possibility to connect to the server by providing information about the IP address, port number, as well as client name. What's more, you can use the server for playing audio files hosted on network drives. You are given the freedom to start or stop the server, view a list with clients, and sort them by IP address. The list with clients can be shown or hidden. The application helps you create a playlist by importing audio files (e.g. WAV, AIFF, FLAC, OGG, MP3, ASF, WMA) and save the playlist to a file on your computer so you can quickly add it in your future projects. You are allowed to start or stop the current audio selection, go to the next or previous song, seek for a position in audio streams, tweak the volume, and shuffle or repeat songs. Bottom line All things considered, ScPlayer comes packed with basic features for helping you manage and play network music, and can be handled by beginners and professionals alike. The only problem is that the application hasn't been updated for a while so you can make use of its capabilities especially on older operating systems, like Windows XP, Vista and 7. ScPlayer Free Download Iceberg Computing has released NetUp, a simple program that lets you add your Twitter account to Facebook or social network accounts. It can be used to link several accounts to one and the same Facebook account for a more convenient access. It is a very simple solution and doesn't require any setup, but you can't use it in conjunction with web browsers. The program needs to be launched via the command line interface (CLI). Iceberg Computing has released NetUp, a simple program that lets you add your Twitter account to Facebook or social network accounts. It can be used to link several accounts to one and the same Facebook

An audio player with a set of powerful functions allowing you to play audio files and playlists directly from the Mac OS. You can add an album or song and can select a particular position within the audio file. To achieve this, you can use audio macros to call the position of the audio file. This application works on Mac OS 10.6 and later. Therefore, you can also use it to play audio files and playlists from your computer. The layout of the application includes the ability to view audio files, volumes, and markers. You are also given the possibility to use a playlist, see what is playing at the moment and to create new audio files. In addition, you can adjust the volume of each track, trim an audio file, copy, paste, add, and remove tracks, as well as delete a track. Other features include: + A basic Mac interface that can be viewed using Retina (iPad) screens. + Audio and video + Playlists + Tempo adjustment + Audio File Import/Export + Audio Tracks Import/Export + Marker support + Files copied in external media + Add a single audio file + Display info about a track + Undo + Fast Forward/Fast Back + Shuffle/Repeat + Share + Split the playback time + Random play + Add a list + Bookmarks + Playlist Support KEYMACRO Features: + Basic music player with basic functions allowing you to play audio files directly from the Mac OS. + Audio and video player. + Ability to record audio clips on the clipboard and to play them back. + Playlists. + Ability to create and edit playlists with the ability to change the order and the ability to select the song. + Ability to add song to a playlist and to delete a song from a playlist. + Tempo adjustment. + Audio File Import/Export. + Audio Tracks Import/Export. + Marker support. + Ability to adjust the volume. + Ability to trim an audio file. + Ability to copy, paste, add, and remove tracks. + Ability to delete a track. + Ability to adjust the speed. + Ability to split a single track and to loop. + Fast Forward/Fast Back. + Random Play. + Skip Tracks. + Show Info about a Track. + Show Info about a File. + Split 81e310abbf

ScPlayer (Scored Player) is a small open-source audio player developed specifically for helping you play music from your local disk drive or network.
