A key feature of the software is the ability to create two-dimensional (2D) and three-dimensional (3D) objects, drawings, and technical drawings. A cad designer may create or edit a drawing in the drafting area, make edits and changes to the drawing, then export the drawing to various formats. A designer may also save a drawing to be redisplayed or printed later. The designer may also apply tags and dimensions to an object or group of objects. Services AutoCAD and other 3D modeling programs are used by governments and universities in engineering, architecture, and land surveying to create models and documentation of public and private buildings, land use, infrastructure, and transportation systems. This information is used in the planning and design of buildings, roads, railways, and waterways. AutoCAD has also been used to create detailed maps of the geography of the world, and create satellite images of the Earth. This type of work was undertaken by the United States Geological Survey, for example. Most modeling software is quite expensive, and AutoCAD in particular is still very much an "all-in-one" solution. The majority of AutoCAD users are in the engineering and construction industries, although the software is also used by architects, surveyors, civil engineers, GIS analysts, landscape architects, structural engineers, mechanical engineers, and interior designers. A variety of AutoCAD users are engineers and technicians in the utilities sector, including natural gas, electrical, water, waste management, gas distribution, communications, transportation, and nuclear. AutoCAD users also include government employees and contractors, such as environmental agencies, government ministries, state and federal agencies, the Canadian and United States governments, the EU, and the United Nations. Education is a very strong user segment of AutoCAD. AutoCAD is also widely used by students, teachers, and professors in universities and colleges. The company's product manager Tom Braden estimated that in 2006, a third of all science and engineering students in the US were using AutoCAD. Government and academic use Autodesk's American and Canadian employees of government and academic use are given personal licenses to use the software free of charge at no cost for the duration of their employment at Autodesk, and are required to sign non-disclosure agreements with Autodesk. Most of the countries in the world that use AutoCAD to maintain national infrastructure and infrastructure planning use a version of the software for similar purposes. The Netherlands uses the software, as does Norway, Iceland, the Czech Republic, Sweden, Canada, China, the United States, Japan, Germany, Denmark, Greece, Finland, France, Switzerland, Austria, Great Britain, Belgium, and Italy. Universities and colleges worldwide use AutoCAD to complete the education of students. History Development AutoCAD has a history dating back to 1976, when it was initially created by Ingo Maier. The initial name of the program ca3bfb1094
