Field of the Invention The present invention relates to a print system which prints a printed matter such as a document by means of a printer while transmitting data to the printer from a host, a control method for the same, a program, and a storage medium. 2. Description of the Related Art As an output device of a computer system, a printer connected with a computer system via a printer controller has conventionally been known. According to such a printer controller, when a print instruction is made from the computer system, the printer controller determines the print timing, the paper type, the number of copies, and the like, and transmits the data that can be printed by the printer to the printer. In recent years, print output processing
