Currently we have two packages that we are looking to try. One has a full weapon set geared up for PvP and this one has gear geared for scenario and content geared. I'm finding it is interesting that Necromancer is never mentioned when talking about bosses/NPCs in a dungeon. How much is Necromancer and what are his flaws like? Also how does he fit in with your other assorted raiders? How hard is Shrink while having a shotgun pumping. Pack a shotgun as HE with AS for penetration or a 2-hand, also AE (the other 2-hander) as I need recon for Tracking. Aside from Shrink my one thing keeping me from going Necro in my 11 man is possibly Unmade and what it does to my Death Trap. How do you kill all the parasites on a timer? Rando...man alive, that takes some thought. This is one of the things I am looking at bringing in with the stuff we need for PvP, so that we have a more martial array and still can be effective. You really need to give us some more details on how this sounds. It's then good for us to know what you're asking for, and you know it's hard to juggle all the bases. A characterization to my understanding is an algorithm which, given a TAC F, outputs a machine M_F such that $\Phi \preceq M_F \equiv F$ I know that the characterization exists for an arbitrary tree automaton (though they're a bit different from plain TACs). If we have any other restricted type I'm curious. A: Yes, this is a standard theorem. Even the characterization of nontrivial TACs (i.e., those that are not word defining or trivial t.t.b. [aka. the relations always hold]), is a first-order theorem, not an algorithm, but its proof requires one. If you want an algorithm, the most efficient current algorithm I know of for TACs is due to Bouyer, Hannebusch and Meier (1999). A simple
