From the Stardock thread: With the release of Starfire 2, I've started work on a pre-activated version of Starfire 1.5.1. What is this? A: Sounds like a Steam application (that requires an EULA). Q: Deleted files and directories not showing up in bash history? I ran a cron job to compare a changeset with the last release, and I made some changes, but then deleted the folder my changes were in. I also deleted a file from a test environment, but it doesn't show up in my bash history. Is there a way to fix this? A: If I remember well, on bash history, the file/folder you have deleted are probably still listed (with the ls command) and are most likely in the list of previous commands. Just type: ls -al And you will probably find it in there. Actually, for more info, you could check the man page of bash: man bash It's still a good bet, though. A: A file/folder which have been removed will be listed with the command ls of or ls of -t if that does not work. Transforming growth factor-beta1-induced myofibroblast transdifferentiation of dermal fibroblasts. The transforming growth factor-beta (TGF-beta) family of growth factors is involved in tissue remodeling in normal development as well as in wound healing and fibrosis. TGF-beta1 is expressed in normal dermal fibroblasts and at the wound edge, but its role in this process is unknown. Using an in vitro cell culture model, we show that TGF-beta1 induces a fibroblastic phenotype in subconfluent dermal fibroblasts but not in confluent cells. This is supported by both gene expression and biochemical analyses. TGF-beta1 is mitogenic at subconfluent cell densities but growth inhibition occurs at confluent cell densities. In addition, Smad3 is phosphorylated upon TGF-beta1 treatment at both cell densities, which suggests it has a signaling role in this process. Confluent dermal fibroblasts are resistant to TGF-beta1 stimulation, even when they are switched to their proliferative phenotype, which suggests that cyt
