Crazy Ball Adventures - Classic is inspired by the classic game Crazy Ball, and adapted to modern gameplay. Dodge obstacles, collect coins and enjoy a crazy journey in the classic Crazy Ball style. Crazy Ball Adventures - Classic allows the player to move the ball around the screen using the left or right analogue stick, the A button, or hold the back button to perform a spin. The level design is inspired by the crazy physics and the impressive level of detail in Crazy Ball. "This is the kind of game that makes me want to get out of bed and live on another planet", said Eurogamer. "Fun at a million miles an hour!", said Eurogamer Crazy Ball Adventures - Classic is a platform game style game, inspired by the style of Super Meat Boy. Instructions Post Comment Latest Comments You are getting this in the right arcade category. This game needs to be seen with the gas pedal mashed to the floor for a good time. Hopefully, SEGA will get their act together and get this on a home system, or local arcade in the US. Love the music, graphics, controls, etc. Classic arcade game retro!Welcome to the Sunday Giveaway, the place where we giveaway a new Android phone or tablet each and every Sunday! A big congratulations to last week's winners of the Samsung Galaxy Note 5 and last week's runner up, the Huawei Mate S. This week we are giving away a brand new OnePlus 3, courtesy of our friends at Anker. The OnePlus 3 was officially launched last month. The premium mid-range handset is a throwback to the original OnePlus One, though it's currently selling at a discount. It's got a nice blend of specs for the money, including a 5.5-inch 1080p display, Snapdragon 821 processor, 5.5-inch 1080p display, 5MP front-facing camera, dual-lens 16-megapixel rear camera, 8GB of RAM, and a 2,780mAh battery with quick charge. The latest version of the OnePlus 3, the update 6.1.1 (which is now rolling out on the company's servers), brings in improved stability and performance. Check out our initial take on the phone below: OnePlus 3 in the flesh The giveaway is a brand new OnePlus 3, so grab your chance to win below

Field of the Invention The present invention relates to a photonic element, an optical apparatus, and a method for manufacturing the photonic element. 2. Description of the Related Art A silicon photonic device (Si-PD) using silicon as a material is applicable to the field of signal processing or signal generation, and thus attracts attention as a device enabling low-cost and high-speed high-capacity large-scale integration of optical elements. The silicon photonic device is classified into a type in which an optical waveguide is formed by using an SOI (Silicon On Insulator) substrate having a silicon layer on an insulating layer formed on a silicon substrate, and a type in which an optical waveguide is formed by using a bulk silicon substrate. The type in which the optical waveguide is formed by using the bulk silicon substrate can obtain a low-cost

What's new in Trap Adventure:

10:00-04:00, Sunday, 26 March 2017 Directions: U16 uses the M10, this meetup is in Hammersmith We are aiming to meet up in Hammersmith at around 10am Sunday 26 March. We will be stopping somewhere around U16 on the M10, I'm still working out where specifically. We will have a few people there with U1, U16 and U8 packs. Hope to see you there! Have fun and we'll see you Sunday, We're not this late either! We didn't have a fixed starting time since people are coming from further. This meeting took like 40 minutes to find because I was driving all around Hammersmith until I figured it out. Thing is the route we took was on a Sunday morning. For the next one we are planning to meet on a weekend somewhere around U6 and the M6 entrance, but we are still figuring the details.Q: Show $f\circ T=\operatorname{id}_{\mathbb{N}^*}$, $T(x)=2x$ Show $f\circ T=\operatorname{id}_{\mathbb{N}^*}$, $T(x)=2x$ and $\omega:=\operatorname{id}_{\mathbb{N}^*}$. My Attempt: I already showed that f preserves order (though it was done not entirely right) and I also showed $x\ge y$ implies $f\circ T(x)\ge f\circ

T(y)$, since f is a translation I also proved $f\circ T=\operatorname{id}_{\mathbb{N}^*}$, but I have not really shown yet that $f\circ T(x)=x$ - if $f(2x)=2x$ I could show that they were equal, but I'm lacking the ability to prove $f(2x)=x$ A: The T in this context is not the T from "Tensor product" but the one in $\mathbb{N}^*$. With T as described, we have $f\circ T(2x) = f(2x) = 2x$. $\omega
