Charon Crack

Connecting to the Internet without revealing your real IP, in order to avoid traffic monitoring or simply browse any website anonymously can be easily done by using one of the many proxy servers available out there. However, finding and connecting to the right one, might not be such an easy job and this is why dedicated utilities like Charon are available. Through a simple interface that makes the operation a bit more easy, this program offers you a wide varity of options when it comes to testing proxies from a list you can load with a just couple of clicks. Charon provides several methods for checking each and all the selected items, so you can test the anonymity, scan IP range for proxies and even check search engines to see whether new proxies can be found and added to your list. There are some filters you can apply so as to avoid dodgy sites, duplicates and gateways. Also, with Charon you can select the order in which proxy ports will be checked and have other ports that may be found either deleted or kept just by ticking the corresponding box. Before connecting to a certain proxy server, you can customize the connection options in great detail. Thus, you can set thread control settings, check for HTTP proxies, as well as test the gateway servers to the end of the route. You can even set scores for various features offered by the selected proxy in order to obtain a more accurate rating for that server. The built-in 'Blacklist Scanner' of Charon will enable you to see whether the IPs on the list are detected by specialized servers as undesirable for reasons such as spamming. To sum it all up, it's save to say that this particular software will make it more easy for anyone to connect to a proxy server in a safer manner, knowing if that IP will ensure anonymity and a decent connection speed. Charon Screenshot: Eliminate the need to use a proxy service. Proxifier allows you to use all public servers as your proxy, eliminating the need to have more than one proxy running in parallel. Simply enter the IP of the server you want to proxy with, add some extra information (e.g. name and type of service) and click start. Then click connect to visit any location on the web, tunnel your traffic to the public proxy server and then automatically disconnect from the server. Even though there are many ways to configure your system to allow you to anonymously surf the web, a good option is to use a proxy service. When

What's New In?

Charon is a free utility specially designed to search and check proxies from a list. It provides you with a great number of features in order to make your testing process more accurate and fruitful. We have added that there are options to set up servers that can be used for scanning ports, setting weighting features, searching for specific IP ranges as well as other important features that make the program easier to use. We have been added that you can set a number of options that may allow you to customize the output that will be displayed. Thus, you may force the use of socks5 and force an encryption feature, among other things. Also, if you are looking for a browser to be used with your program, you can select it from the built-in list or add your own by checking the box in the panel that offers you that functionality. You can search proxy server within specific countries, networks and protocols. Thus, selecting from a global list will make it more easy for you to connect to servers that can be used around the globe and with networks that provide various speeds of connection. Key Features: - A list of proxies to choose from - Proxy servers can be added to the list by clicking in an empty space and selecting the option. - Set proxies that you want to test - Customize proxy settings - Set the type of proxy server, Wget or HTTP - Check to see if a proxy is up or down - Check whether the proxy server is detected by the Big-IP IP2Geo API - Set proxy server metrics - Set proxy ranges - Automatic proxy scanning - Check proxy search engines - New proxy added by clicking 'Add to list' - Add custom proxy - Conect to proxies by proxy port - Save settings - Blacklist Scanner for checking a list of banned proxy servers - Locate proxies by country or network - Hide banned or shared proxies - Keep filters in the list - Password protect proxy list - Customize proxy output - Add proxy server in list by clicking 'Add to list' - Move proxy server from the list - Edit parameters and save settings - Autocomplete proxy - Change proxy detection interval - Add proxy group - Reverse proxy - Forward proxy - Proxy provider/sponsor - Clear proxy list - Remove filter and proxy from list - Set proxy list limit - Load/save proxy settings - Set proxy ping - Edit or clear proxy list
