In chronic postgastrointestinal, post-surgical, post-surgical/post-gastrointestinal functions and diseases of the alimentary tract, acupuncture can correct abnormal clinical and functional disorders of the integument by means of stimulation of peripheral nerves and strengthening of the vegetative tonus. Acupuncture influences the changes of the nerve impulse conduction system: decreases latency and increases amplitude of the afferent fibres conduction, normalises the impulse activity of spinal reflexogenic structures. It leads to the emergence of the bioelectromagnetic field, as it is revealed by a decrease in the low frequency, and to a drop in the power of the high frequency waves. The decrease in the amplitude of the high frequency waves is an objective verification of the functional improvement of the gastric and intestinal mucosa. Furia Script

Furia Script, created by Garth Phipps, is an incredibly useful and straight-forward utility for programming and developing applications in HTML and JavaScript, or more precisely, HTML, JavaScript, and Flash, which is the default language. This app has an intuitive and easy-to-understand interface that makes it possible for even the beginner to adapt and program fully fledged applications, containing functions, variables, imports and variables. You can use a web browser to write and compile your program, which you can then save and compile in the form of a file in an EXE format. It uses basic elements from HTML and JavaScript, even relying on the same syntax for code writing. You can also create and add new functions using the functions library, and use macros to easily add text that you can later edit and reappear in the saved program, making it a lot easier to make changes. You can open saved projects using a simple and clean interface with a clear sight of the options available in your newly opened file. You may also edit them using basic tools, like text and color editors. However, more sophisticated tools such as word processors, and even a map editor are available. Very convenient compilation and testing capabilities It is almost a piece of cake to make your apps, for example, draw maps or images, recognize voice commands, check information from websites, link apps, and even play video games, you just need to compile your code into an executable EXE file, and launch it. Furia Script is able to compile and run the projects you want and it makes it possible for you to test them before they are made available to the public and can be downloaded by your users. In just a few clicks, you can easily compile the program you have saved and come up with a fast and reliable method for quickly designing and compiling your apps, which makes it a real tool for anyone who wants to code fully fledged applications. Detailed information on Furia Script Functionalities: • A simple interface with no extra features • Use of HTML, JavaScript, and Flash • Use of drag-and-drop for creating new functions • Build a Windows executable • Clear and easy functions library • Use of basic elements from HTML and JavaScript • Ability to edit the code using basic tools like text and color editors • Use of macros to edit text and add it to a project • Ability to load saved projects from a browser into the editor • Ability to test and debug compiled apps
