Acute kidney injury (AKI) is a severe kidney disease. lncRNAs have been found to be involved in the progression of AKI. However, the role of MALAT1, an lncRNA, in the pathophysiology of AKI is unknown. In this study, we explored the role of MALAT1 in AKI-induced AKI mice. MALAT1 was found to be up-regulated in the obstructed kidney of AKI mice.

The level of MALAT1 in circulation was also increased in AKI patients. In AKI mice, the MALAT1 reduction aggravated renal injury, including inflammatory cytokines release, renal tubular cell damage, mitochondrial dysfunction, and apoptosis. Meanwhile, we found that the overexpression of MALAT1 repressed the dysfunction of renal tubular cells. Furthermore, we found that MALAT1 could activate the AMPK signaling, which was in line with the effect of its phosphorylation on tubular cell injuries.

Furthermore, the effects of MALAT1 on AKI-induced AKI mice could be partially reversed by AMPK inhibition. These results suggest that MALAT1 may be a potential target for AKI therapy.
