Wow.. What a hack.. I tried this one and it worked too.. Thanks sooooo much for that.. It's really a nice hack.. Thanks for this.. : D....Universality of shape and angular momentum scaling for a single-file polydisperse chain. For a single-file polydisperse chain a small deviation from the purely linear shape is observed for a temperature close to the theta temperature. The shape deformation is estimated to be of the order of 3%. We use this small deformation to determine a universal exponent for the shape, angular momentum, and the excess grand canonical specific heat. This provides a very efficient and systematic way to test the universality hypothesis in single-file. We find no violation of universality. Instead, the exponent value is in good agreement with the lattice Bethe Ansatz value./\* \* Copyright 2019 Amazon.com, Inc. or its affiliates.
