
Basic4Android 7.01 With Library 2017

Download

March 1, 2017 - For example, if I have a library that adds two numbers ($a+b$), can I put this jar in my phone memory/sd card and execute the code in my b4a app... Or does it require an additional license? If so, how can I prevent it from loading Yes it is possible and it will be done for every android program. This way, not only will you protect the library from downloading, but you will be able to use it in your application without requiring a license as it will be included in your

application. I don't think you will have any licensing issues. It doesn't require any license because you don't use the library in your program.
