if youve got a psp and a vita, or a vita and a vita with the wireless adaptor, then youll need to connect them to the computer. the vita has 2 usb ports, one on the front and one on the back. plug the front one into the usb port on your computer. on the back of the vita, youll find a little usb connector, and thats the port you need to plug the vita into. make sure your computer is on, and its connected to the internet and your psn account. youll then be able to play ps vita games on your pc. theres not much else that i can tell you that you can do, other than to go into the settings menu and make sure your vita is connected to the internet and its connected to your psn account. you can also turn off the video and sound settings on the psp, so that you dont get any strange errors when you try to connect to the psn. just go into the settings and make sure the sound and video settings are turned off. once youve done all of that, go into the settings menu and open the main menu. from there, go into the ps store and download a game or two. once youve done that, go back into the main menu and turn the sound and video settings back on. if your vita still works fine after that, you can probably skip to the next section. what are you talking about sony doesnt have any customer service. xd. seriously, my vita had screen oddities right out of the box that never went away. it massively *** me off. my serials stayed intact, but only because it statys in the case and out of light until i remember i bought it and play with it. has anyone used a coating to try and protect the serials (on the back or front of the stickers.) either way, where was the qc and qa come awwwn sony. you either get excellent qc or excellent service. sony thinks they can get away with neither and still force people to take it with a smile. we shall see, sony. we shall see.

i also had a problem with the ps vita not recognizing my memory card. i tried to fix it for about 6 months and could never get it to work. i finally gave up and gave it to my local sony representative. he took a look at it and told me that it had a hardware problem. he also told me that the sony rep's can not repair it because the memory card is installed in a different part of the console. he then told me that if i took it to another sony store they could fix it for free. i was a little shocked at that and said that was not what i wanted to do because i already paid for it. he said that he knew that, but i could go back and get my money back if i wanted. i finally took it to the other sony store and they repaired it for free. i was amazed at how easy it was to do. i just took it back in the store and asked if they could fix it. they told me that it was not their job to fix it. they told me that my problem was that the serial number had not been found on the screen when it was being repaired. the rep told me that he would be happy to refund my money to me. to this day, i still have not had my money back and have not bothered to go back to the store to get it. if sony wanted to protect your ps vita from future modifications, they would have left it behind. it doesn't make any sense. as for having a range of serial numbers, since the 1st units were in stores on september 29th 2006, they could have started with a number of 20000 to at least 10,000 units. so chances are, that's the range in which they started, but not the case. the serial number ranges also vary from one region/model to another. 5ec8ef588b
