If you're a designer and an Apple fan, you know they might be the big new company in technology. Since they keep advancing technology with each release, it's easy to see it will be important in the future of the tech industry. During its decision to purchase Lightroom last year, Apple made it clear that they wanted products to feel like one integrated, cohesive experience. Adobe took this feedback to heart and is taking its most advanced imaging applications to desktop and mobile with the introduction of Photoshop Document, Photoshop Mix and Photoshop Sketch. In addition, the iOS app will soon be upgraded to include the integration of the Adobe CreativeSync Technology, which will let users use their mobile device as an external image editor on their computer and share content with their Creative Cloud membership. "Adobe Photoshop is one of the most deeply embedded products in the company's portfolio," said Shantanu Narayen, CEO of Adobe. "With this release, we are extending the reach and improving the ease of use of our world-class creative software, including both desktop and mobile apps, to another platform. Importantly, we are also delivering features that leverage our deep experience in digital imaging and hybrid touch technologies, so that our customers can easily create and collaborate on creative projects in new and even more inspiring ways." The latest version of Photoshop will work seamlessly across all screens and with nearly every device and operating system - from PCs to tablets to smartphones and beyond. And with the continued shift to mobile and touch-based applications, the interface of Photoshop has significant changes to accommodate this shift.
