Adobe has just rolled out a new beta version of Photoshop CS5.9 that adds a new selection mode called "Smart object," which now allows you to select only those details you want to edit in resolution-independent screen space, while retaining control over things like miscellaneous fills and special purpose paths. The "Rulers" palette, a key addition to the program for decades, has been redesigned to highlight new ruler locations, auto-fit margins, and color-coded options. Other new features include a "Switch Reference" up-time setting that locks you in to a reference resolution; a new "Go to Layer" panel to help you find your way around while working; and a new "Wayback" mode that helps you undo and go back a step when you go too far into an editing process. Photoshop CC has a small but nice set of built-in brushes. The design team made sure that each brush has at least 50 different presets. Photoshop CC even includes the Power Stroke, the industry standard radial gradient brush with no subscription cost. But some other pre-packaged brush choices that feature premium brushes from top designers like Patrick Allen, Kenney Grayson, and Josh Hicks are also available for \$1.99 each.

"Today's announcement is the latest example of our dedication to being a platform-based creative company that gives users access to the tools and services they need to unlock their creativity." To fix these problems, you can use the most popular selection tools like the Magic Wand, the Color Range, the Lasso, and the Polygonal Lasso. You can save the image right after applying the content-aware fill, and apply it to any other image.
