Previously in the days of Photoshop CC, you would need to sign up for a subscription to use some specific features, like camera, or create images with text. Now, you can use them in the browser on any device you use, and the results are much more powerful. No more long wait times on your computer, which is nice, but the best thing is that no matter what screen size your computer is on, your images will always look the same. Another fun fact is that it's actually possible to use these features without signing up for a subscription, but you will miss out on some cool features. Today, you can use the Color and Swatches tool with the content you created in Photoshop, and save the custom colors to use on another image you create. This way, you can use the exact same colors as much as you like without having to create different versions. Most importantly, you can now create custom color schemes with Solid Color Wheels. Previous Photoshop versions allowed you to modify images online, but didn't really allow you to create your own images. Photoshop Camera allows users to create new content in the browser without the usual steps. It's this interaction that's most exciting. Imagine the artistic possibilities. 933d7f57e6

To simplify the design process, Photoshop now organizes all layers of every image in one “image layer” workspace called Layers panel. With this new feature, you can easily access the layers of any image, regardless of the size of your canvas. Adobe users can now work with the new image at a new zoom scaling level within Photoshop. This means they can now see only the detail required to complete their projects, while Adobe’s cloud servers optimize the delivery of only the content the user requires with each update. For even better performance, Photoshop will now natively support videos and 3D content using the native GPU. Adobe Pix is built into Photoshop, and with it, you can now edit 3D artwork and other videos in native 3D. Adobe Pix can also export 3D into Photoshop as a 3D Layers panel, Facet panels, and 3D text. The new Shape Order panel was designed to allow users to easily change the order of any two or more layers, easily applying a new order for one or more layers. This gives users a quick and easy way to move selected layers, groups, or other selections around based on naming conventions or whatever criteria is most convenient for the user. Adobe Photoshop now has a new dynamic Filter menu to apply filters and effects in a single action. No longer do users need to click through a long sequence of steps to apply multiple filters, masks or brushes. Simply click on your desired filters and effects, and drag them to your image. And then just like that, Photoshop applies the effects and adjustments to whatever area you drag your tool into.
