Just upgraded to Photoshop CC 2015 from CS6. It is a clear improvement over CC 2014 at the same price. It is also important to note that it added the new Content Aware Fill feature (activated by Shift+click to fill in an area with the same background color and structure). If not using it, be careful as there also seems to be an issue with selecting other content and using Exclusion Regions with the selection tools (Ctrl+LMB). Seems the bug would be more noticeable with a larger area and once filled in, any future selection tools will exclude the fill you used instead of filling in the hole beneath the old selection. I also noticed that the Content Aware Fill algorithm became in need of correction since it no longer seemed to match the background for each image. I think the program will run better with the updated algorithms and corrected amount of overlap. Also, if you are not a pixel peeper – be aware that the new layers and masks are still not a pixel for pixel layer. I measured the difference and it is significant. I would recommend keeping everything at 100% sharpness and letting the new layers and masks work out the ruler issue. I would also be careful with the options for the Removing Shadows, Reflections, and Bevels. If you leave these at default, shadow areas will stay after erasing. Don't delete those layers too, as you will have to click the "Detach" button to get rid of them. You can't just right click on them and select "Remove Layer" as they are still attached. The same is true for Bevels. If you select these options, click on the "Detach" button you will have to delete all of those layers before deleting the original layers. You might also want to have a look at the new Fade options in the Reduce Noise mode. It seems to work better than the Standard method, also allowing you to select a negative amount of pixels to give a smoother transition. And it is a nice touch how most of the image can be selected as the background to fade into. You cannot get the same effect with the standard copying. All the other modes work better with the Standard method, however. I will update this review once CC is released. It sure seems faster which is nice...almost too good.

It was an old rumor that the name of Photoshop was derived from a word in a magic incantation. It was revealed that it is the acronym of PhotoShop. The first program that incorporated this idea name was one called OmniQuad, which was released in 1994. The landmark product was released by the company Macromedia that was later bought by Adobe. Hence, the company named Photoshop after this multifunctional product. However, the marketing team felt that the name of the product is too long and had more chances of being mispronounced. So, they came up with the short name Photoshop. With the new tools, and a new workflow, your post-processing of photos and videos can be streamlined.
